

The ARRLs plan is a great idea and will somewhat fall inline with other countries. More code is just one of many aspects of Amateur Radio and should be treated as such. Amateur radio would be very messed up if we restricted people on only the aspects they know. If for some weird reason morse code wasn't dropped for HF then everyone should pass a test to operate all the other aspects(Satellite, Microwave, APRS, Data, internet linking, ATV, repeaters, digital, etc) Now that's just a step backwards. On top of that, we want the amateur population to increase and keeping more codes isn't in the best interests of amateur radio. Go with the ARRL plan and be done with morse code as a requirement.
